EXPERIENCE

Frontend Developer Acid Labs

Jun 2024 — Present

Role in Airtalk (LATAM Airlines)

Airtalk is LATAM's strategic assistant that turns natural language into SQL via LLMs so business teams explore data without writing queries. I contribute to the AI analytics layer, business rules, context shots (e.g. FO, ASK, RPK), and prompt/evaluation pipelines.

- Own user experience for the Airtalk web product—flows, clarity, and stakeholder-ready UI alongside the conversational experience.
- Ship and iterate the public marketing landing and in-app web surfaces that introduce Airtalk to internal users.

Frontend Developer Modyo

Apr 2023 — Apr 2024

Joined a mature product company building on a microfrontend architecture. I maintained and evolved the public digital channel of a major Chilean bank—shipping UI improvements, fixing production issues, and coordinating with stakeholders. Day to day I worked with Vue, Figma, Git, vanilla JavaScript, SCSS, and GitHub Actions.

Full Stack Developer Xepelin

Apr 2022 — Nov 2022

Xepelin is a LATAM fintech focused on easier access to financial products for small and medium businesses through its online platform. Together with the team I estimated work, implemented new features in a fast-changing roadmap, and kept production functionality healthy with fixes and small enhancements.

React Developer Digbang

Jan 2020 — Apr 2022

Contributed to a greenfield frontend from early discovery through MVP launch inside a solid engineering culture. Later I joined a cross-functional squad for OLX's automotive vertical, delivering new product flows and campaign landings localized for Chile, Mexico, and Colombia.

Frontend Web Developer Almundo

Nov 2017 — Dec 2019

Member of the flights-area frontend team shipping features for the consumer web app together with design and backend engineers. We prioritized usability and performance while planning work in agile Scrum cycles and keeping delivery aligned with commercial goals.

Full Stack Developer Visa

Apr 2015 — Nov 2017

More than two years on Visa's "Todo Pago" program, extending web services that process card transactions across electronic payment channels. Responsibilities included new functionality, regression-safe changes, and ongoing maintenance alongside on-call support for production incidents.

EDUCATION

Technical degree in Computer Programming

Universidad Nacional de General San Martín
2014 — 2016

Cybersecurity Prevention

EducacionIT
Jan 2019 — Mar 2019
